## Glossary

**Price to Estimated Earnings (P/E)** is a weighted average of the P/E ratios of the portfolio securities. The P/E is calculated as the ratio of the current price of the stock to the 12-month forward earnings per share estimate.

**Earnings yield** is the earnings per share for the most recent 12-month period divided by the current market price per share. The earnings yield (which is the inverse of the P/E ratio) shows the percentage of each dollar invested in the stock at the current price, that was earned by the company.

**Price to free cash flow** is an equity valuation metric used to compare a company's per share market price to its per share amount of free cash flow.

**Return on equity (ROE)** is the amount of net income returned as a percentage of shareholders equity.

**Price-to-book ratio** is a ratio used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share.
